1、Completeness of Technical Content

- [x] Experiment is complete with excellent data analysis and conclusion
- [ ] Experiment is complete with good data analysis and conclusion
- [ ] Experiment is complete with ordinary data analysis and conclusion
- [ ] Experiment is incomplete with insufficient data, ordinary analysis and conclusion
- [ ] Experiment is poor, with insufficient data and no analysis or conclusion

2、Scientific Significance

- [ ] The research is of excellent significance and makes great contributions to the development of the discipline
- [ ] The research is of good significance and makes general contributions to the development of the discipline
- [x] The research is of ordinary significance and makes a little contributions to the development of the discipline
- [ ] The research is of poor significance and makes little contributions to the development of the discipline
- [ ] The research is of no value for research

3、Scientific Rigor of Data

- [x] Data and analysis are good to support the research conclusion
- [ ] Data and analysis are ordinary to support the research conclusion
- [ ] Data and analysis cannot support the research conclusion

4、References

- [x] References are good to support the theoretical research
- [ ] References are ordinary to support the theoretical research
- [ ] References cannot support the theoretical research

5、Conclusion

This paper addresses the issue that SGRL neglects mesoscopic communities, and proposes GBGCL. The authors construct quality-guided granules and diffuse them in the graph, and inject the mesoscopic topology into the dual encoder using BTCM. Experiments show that it outperforms SGRL slightly on four benchmarks, with the highest improvement of 0.09 percentage points. The ablation study indicates that BTCM is the key, but the gain is limited and the innovation is small. However, there are some issues that need to be addressed before the paper can be published. Please see the comments section for details.

6、Comment

1. The layout of the article is improper, resulting in numerous blank spaces. 2. Please follow the paper template on the official website of the conference to typeset.
